Designing & Analyzing Processes

Flowcharting

- Process Flow Chart

- ❑ The Flow Process Chart is a symbolic representation that illustrates the sequence of actions within a process.
- ❑ It is commonly used when analyzing the steps in a process to help identify and eliminate waste.
- ❑ It records the steps of a process along a vertical line.
- ❑ It is used to show the steps of a process using symbols along with text.

- Process Flow Chart

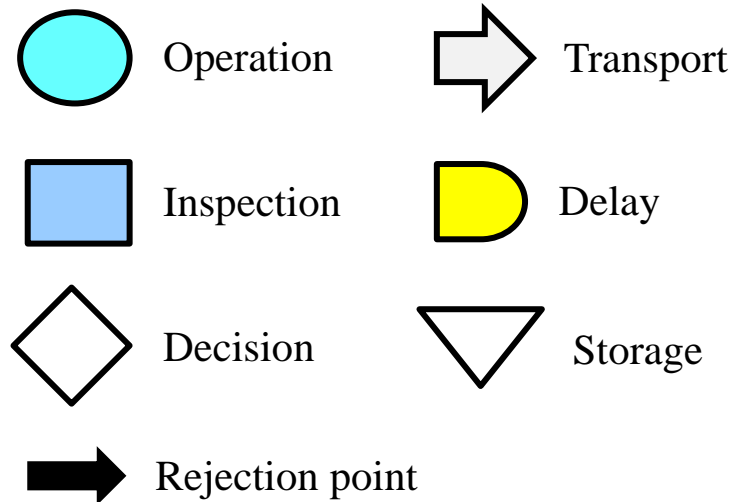

- ❑ A useful feature of the Flow Process Chart is that it can be drawn up as the process is happening.
- ❑ This will allow getting an accurate description of the process.
- ❑ By watching and recording, a person for example can follow a part, noting how and when it is produced, moved, checked and stored.
- ❑ This ensures that what actually happens gets recorded.
- ❑ Later when analyzing the process, some steps become obvious candidates for improvement, such as long delays and non value adding activities.

- Process Flow Chart

Common Symbols:

- ❑ **Operation:** Produce or process something.
- ❑ **Storage:** Storing materials or other items.
- ❑ **Transport:** Movement of people, materials or other items.
- ❑ **Delay:** Idle time of people, material or machinery.
- ❑ **Inspection:** Checking of items to ensure correct quality or quantity.

- Process Flow Chart

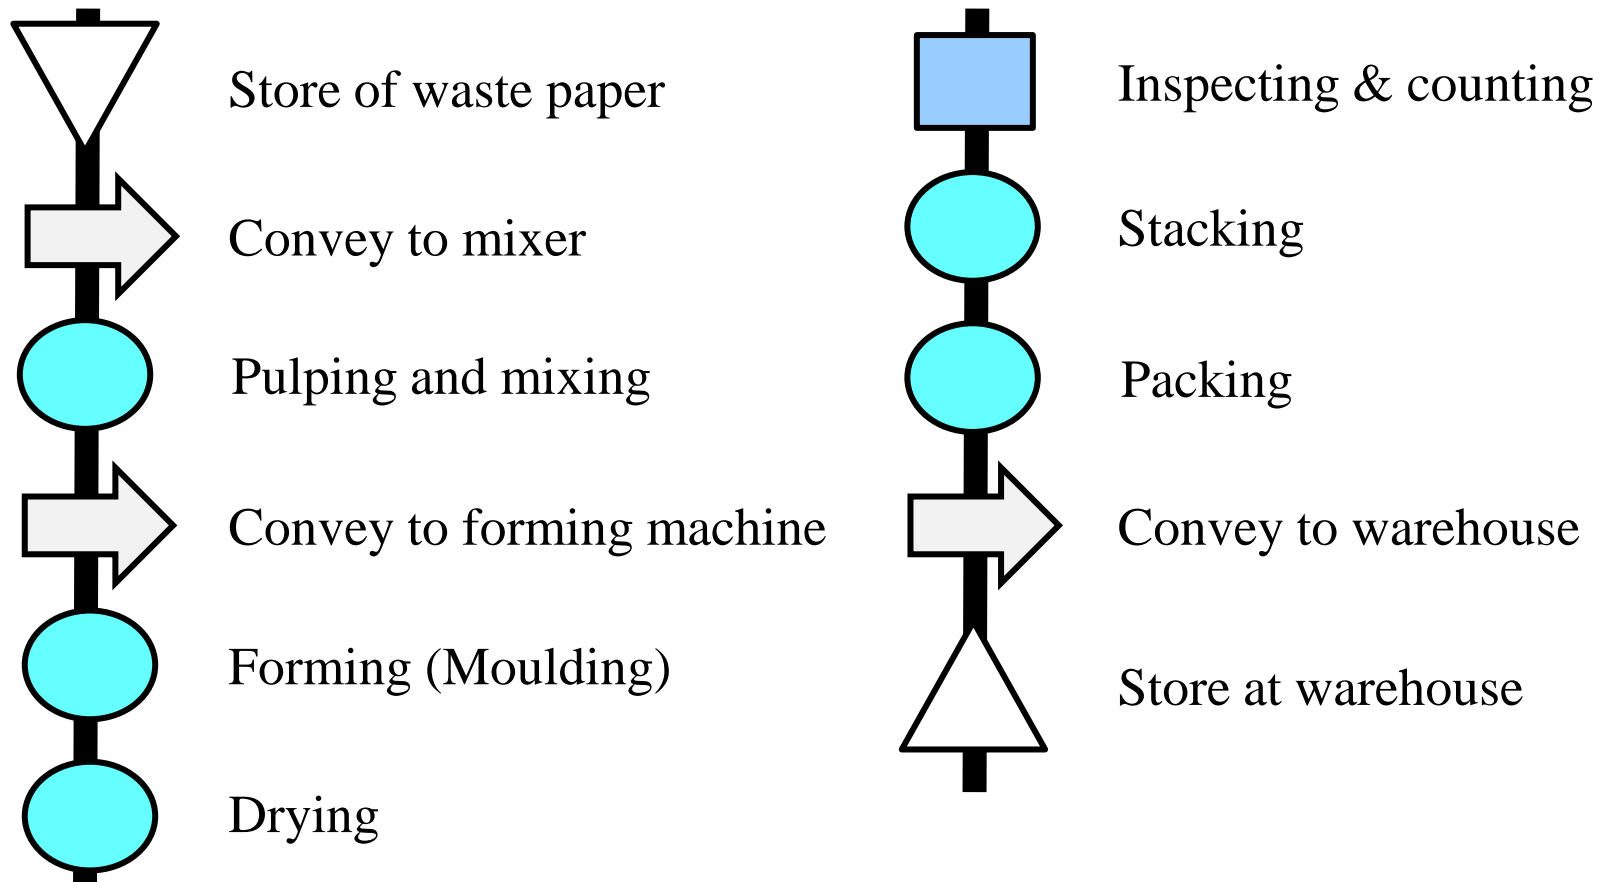

Three Types:

- ❑ A **man-type** chart which shows the actions of a person.
- ❑ A **material-type** chart which shows what happens to a product or item.
- ❑ An **equipment-type** chart which shows how a tool or other piece of equipment is used.

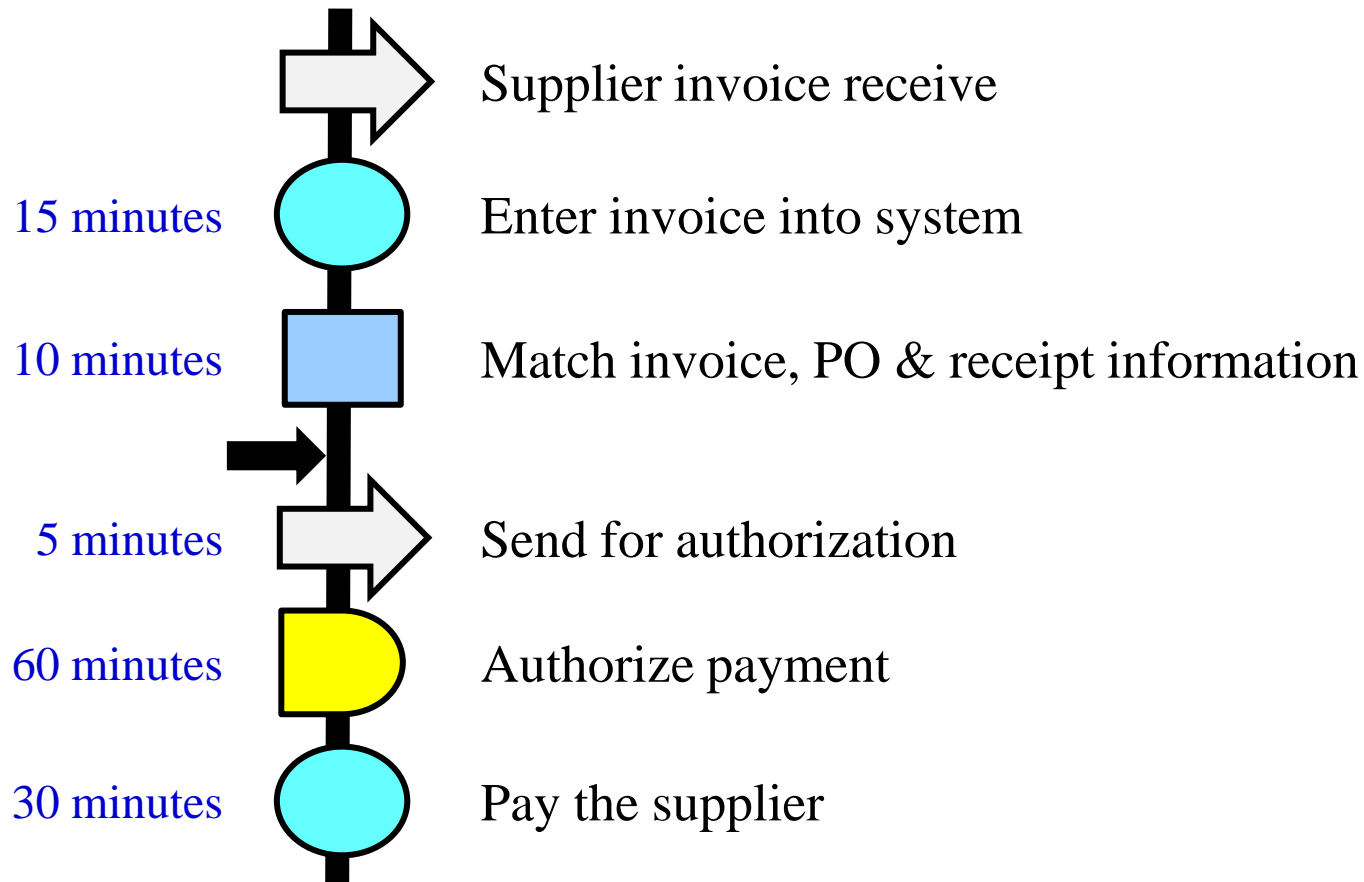

- Process Flow Chart

Example –Egg Trays Production:
